The Point Of Collection: “the moment when data becomes data”

1. Data sets are the results of their means of collection.
2. As we collect more data, we prioritize things that fit patterns of collection.
3. Data sets outlive the rationale for their collection.
4. Especially combined, data sets reveal far more than intended.
5. Data collection is a transaction that is the result of an invisible relationship.

Where Do Social Data Come From?

Sources:

- **Official Records** (birth records, census, court data, school records, etc.)
- **Digital Archives** (news stories, press releases, historical records)
- **Commercial Data** (credit scores, purchase histories, loyalty programs, etc.)
- **Social Network Data** (posts/photos, comments, "likes" / reactions, etc.)
- **Platform Traces** ("digital exhaust": clickthroughs, search data, geolocations, etc.)
- Others?

Data Types: Table

	Example	Who Controls?	What's Missing?
Official Records			
Digital Archives			
Social Media			
Commercial Data			
Platform Traces
